MAKE-A-RING

BRAND RULES.

How Make-a-Ring looks, moves, sounds and speaks. The site follows these rules exactly; anything new is built from them.

BRAND RULES		v1.0
PROJECT Make-a-Ring	DATE October 2026	SHEET 1 / 8

01 · IDEA

A DRAFTING TABLE FOR RINGS.

Make-a-Ring is a design studio you can use without being a designer. The visual language comes from the jeweller's bench and the engineer's drawing: a grid, registration marks, dimension lines, title blocks, honest numbers. The ring is always the hero; the interface steps back.

Calm

One main action per view. Muted surfaces, one accent. Nothing blinks, bounces or shouts.

Precise

Real millimetres, real prices, real printability limits. Measurements are set in mono, like a drawing.

Hands-on

You touch the ring: drag it, scroll it, stretch its diameter. Every action answers at once.

VOICE

DO

- Talk to the person: "your ring", "pick a size".
- Short sentences. Plain words. Verbs first on buttons: "Open the studio", "Try it on".
- Numbers with units: "Ø 17.3 mm", "$78".
- Say what happens next, and offer Undo after anything destructive.

DON'T

- Exclamation marks, hype, "amazing", emoji.
- Jargon without help ("MSLA" always comes with "resin printer").
- Section numbers or symbols as decoration (no §1).
- Real brands, real people or invented testimonials.

THE MARK

A ring seen from the front, with the diamond on top in the accent colour. The wordmark is Archivo ExtraBold, wide (118%), uppercase; the "-a-" takes the accent.

Rules

- Clear space on every side: the height of the mark (dashed line above).
- Smallest size: 20 px mark, 14 px wordmark.
- The diamond always uses the theme accent; the ring and letters use ink.
- In the app the logo is also the link home, with a "Home" button beside it.

DON'T

- Stretch, outline, rotate or add effects.
- Recolour the diamond in anything but the accent.
- Set the wordmark in another font or in lowercase.

FOUR THEMES, ONE SYSTEM

Every theme sets the same tokens. Components only ever use tokens, never raw hex values, so a button looks right in all four.

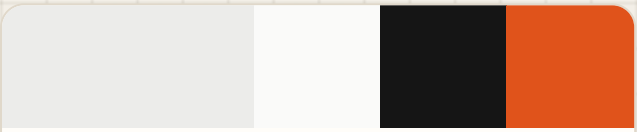

Beige (default)

`bg #f3efe7 · surface #fffdf9 · ink #1c1a17 · accent #a8792a`

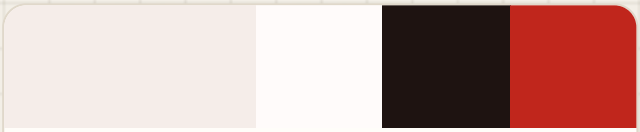

Blue

`bg #eaf0f7 · surface #fbfcfe · ink #0e1a2b · accent #1f5fd1`

Gray

`bg #ececea · surface #fafaf9 · ink #151515 · accent #e0531b`

Red

`bg #f5ede9 · surface #fffbfa · ink #1e1311 · accent #c0261c`

ROLES

TOKEN	USED FOR	NEVER FOR
`--ink`	Text, the primary button, selected chips and tabs	Large backgrounds
`--accent`	The creative action (Draw your own), the logo diamond, dimension lines, focus, progress	Body text, more than one filled button per area
`--surface / -2 / -3`	Cards, panels, hover and pressed states	Text
`--line / --line-2`	Hairlines and borders, 1 px	Anything thicker than 1 px
`--on-ink / --on-accent`	Text and icons sitting on ink or accent fills	Text on light surfaces

`ok #2e7a4d` `warn #8a5b00` `error #b3261e` `info #335a88`

Status colours are shared by all themes and always come with an icon and words, never colour alone. Text meets WCAG AA (4.5 : 1) on its surface.

THREE VOICES

DISPLAY · ARCHIVO

MAKE A RING.

Landing: 800–900 weight, width 118–125 %, uppercase, tracking −0.03 em. App screens (studio, try on, review): 750 weight, width 112 %, sentence case, so long titles stay readable. Titles only; never for buttons or paragraphs.

INTERFACE · INTER

Pick a size, then open the studio.

400 body, 500 chips, 600 buttons, tabs and card titles. Every control on the site is Inter. Body 15 px / 1.5.

DATA · IBM PLEX MONO

Ø 17.3 MM · US 7 · $78

Measurements, prices, small uppercase labels (11 px, 600, tracking 0.08 em), keyboard keys. Never for buttons or tabs.

SCALE

11 12 13 14 15 16 20 28 44 70

Only these sizes (px). Small UI text is 12 or 13, never 11.5. Display sizes are fluid (`clamp()`) between 28 and 200.

ENGRAVING FONTS

Lora and Dancing Script (and the other engraving faces) are product content: they appear only in engraving previews and on the ring itself, never in the interface.

SAME JOB, SAME LOOK

BUTTONS: INTER 600, PILL

Open the studio → Draw your own Back

Small 13 Medium 14 Large 16

- **Primary** (ink): the one next step of the view. One per view.
- **Accent**: the creative action only (Draw your own).
- **Ghost**: secondary and navigation (Back, Home, Share, Save).
- **Hero keys**: the two landing calls to action are drawn as keyboard keys (radius 10, a 4 px "key" shadow), because the studio is driven with the arrow keys. Hover lifts the key and lights it in the accent; pressing pushes it down. Used nowhere else.

ICON BUTTONS: SQUARE, 1.8 PX LINE ICONS ON A 24 GRID

36 px · radius 10 | 30 px · radius 8 · always with a label for assistive tech and a tooltip

CHOICES

6½ 7 7½ Left Right

- **Chips** (Inter 500, 13 px, pill): picking one value from many. Selected = ink fill.
- **Segmented** (Inter 600, 13 px, radius 10/8): two to four exclusive options.
- **Switch**: on/off settings, accent when on.

SHAPE & SPACE

TOKEN	VALUE	WHERE
--radius-sm	8 px	Small icon buttons, menu rows, inner segments
--radius-md	10 px	Icon buttons, tabs, stamps, segmented controls
--radius	12 px	Cards, panels, menus, the band map
pill	999 px	Every text button and chip
spacing	4 px grid	4 · 6 · 8 · 12 · 16 · 24 · 32 · 48

SMOOTH, NEVER SPRINGY

KIND	DURATION	EASING
Hover, press, toggles	150–200 ms	ease
Carousel step, cards entering	280 ms	`cubic-bezier(0.2, 0.8, 0.2, 1)`
Page to page (curtain)	460 ms, one sweep	`(0.5, 0, 0.75, 0)` then `(0.25, 1, 0.5, 1)`
Values that follow a target (size drawing, tray)	≈ 0.5 s	critically damped spring: no overshoot

THE CURTAIN

Screens sit in a row. Between them a curtain (the page colour, the drafting grid and a thin accent edge) sweeps across in one continuous move: from the right when you go deeper, from the left when you go back. It speeds up as it covers the screen, the page swaps at the instant it is fully covered, and it carries straight on out the other side. The content itself never moves or fades, so text and images never flicker.

Home → **Start** → **Size** → **Studio** → **Try on** → **Review**

- Nothing wobbles, bounces or loops for attention. The only idle motion is the ring turning.
- With "reduce motion" switched on in the system, every transition is instant.

SOUND

Quiet, synthesised, and always paired with something you can see. Muted from Settings; the choice is remembered.

MOMENT	SOUND
Picking or dragging a size	Measuring-tape ratchet clicks
Confirming a size in the size finder	A soft snap (a click, no thump)
Saving to My designs	A bright rising arpeggio, about a second
Files ready	A small three-note chime
Side panel opens / closes	One soft click
Typing an engraving	Fine engraver taps

No sound on hover, on page load, or when changing material. No low thumps or drum sounds.

THE RING FIRST

Left: library
Patterns, your own patterns and templates. Click the active icon again to hide the panel.

Centre: the ring
The cross carousel around the 3D ring, the selectors, and the unrolled band.

Right: specs
Size, layout, band, material, engraving, printability, and the price with the next step.

- The 3D ring is the bottom layer of the stage and is never cut off by a box.
- On small or zoomed screens the interface scales down (to 80 %) so the ring keeps its room.
- Colour theme, grid and sound toggles sit together in the top bar.
- Every screen has a way home: the logo and the Home button.

CHECKLIST FOR ANYTHING NEW

RULE
☐ Uses tokens for colour, radius and font; no raw hex in components.
☐ Buttons are Inter 600 pills; tabs and chips Inter; mono only for data and labels.
☐ One primary button in the view; accent only for the creative action.
☐ Text sizes come from the scale; small text is 12 or 13 px.
☐ Works by keyboard, has a visible focus ring and a label for screen readers.
☐ Motion uses the durations above and stops with reduce-motion.
☐ Copy is short, plain, second person, with units on numbers.
☐ Fits 375 px phones and 1440 px desktops without sideways scrolling.
